

Specifications of Acted Features

Symfony setup

The main purpose of this feature is to setup a Symfony2 platform for Acted, with a Doctrine2 ORM to manage the data with a PostgreSQL database.

Input

YAML schema for the database structure (to be improved).

Expected output

A Symfony2 platform ready to deal with database interactions and to create new bundles.

Core development

Components:

- Symfony2
- Doctrine2
- Twig
- PHP tests framework

Constraints

No commercial or licensed frameworks or API should be used to achieve this module.
Only open-source codes or frameworks could be integrated in the final module.

Test materials

No test materials.
